Do Thanh Nhat Nguyen

Shopify Developer

Shopify Developer with **4+ years** building custom **themes, sections and Shopify apps** for agencies and brands. I own features end to end, from requirements to deploy and support, replace paid third-party apps with fast in-house ones, and ship practical AI features on a live store. **15+ stores launched.**

SKILLS

Shopify	Liquid, Online Store 2.0 sections, theme app extensions, custom apps, Admin GraphQL/REST API, App Proxy, webhooks, metafields, metaobjects, bundles, Web Pixels, Polaris
Frontend	JavaScript, TypeScript, HTML, CSS/SCSS, Tailwind, Vue, React, Svelte/SvelteKit, Remix, Astro
Backend	Node.js, Express, NestJS, Python (FastAPI), PostgreSQL, SQLite, Redis
Cloud	Cloudflare Workers, D1, R2, KV, Workers AI, Docker, GitHub Actions, Git, Figma

EXPERIENCE

2024 - now

Sartoro `full-time`

Made-to-measure menswear brand on Shopify (sartoro.co). I build most of its custom software, usually solo, from storefront features to the admin tools staff use daily.

+ Main developer of the live Sartoro Shopify theme (1,200+ commits): configurator product pages, fit profiles, cart drawer, recommendations, predictive search
+ Built custom Shopify apps that replaced third-party apps: product options and bundles, wishlists, reviews and Q&A
+ Shipped AI features on the live store: virtual try-on, natural-language product search and an AI stylist chat with guardrails
+ Contributed to, then led the rebuild of, the order and tailoring operations platform (fit profiles, order re-confirmation, measurement analysis)
+ Built first-party analytics with fit-tool funnels and Core Web Vitals alerts after theme deploys
+ Maintain the company Vue.js web app and Node.js + React apps; integrate third-party APIs; coordinate outsource partners

2023 - 2024

QDN Digital `full-time`

+ Built custom features for client campaigns and events using JavaScript and Shopify Apps
+ Led a small team of 1-2 junior developers, handling code review and Git merges
+ Delivered projects end to end: filters, search, upsell features and full store builds
+ Daily syncs with PM; maintenance and hotfixes with fast turnaround

2023 - 2024

Scentiment Ecommerce `part-time`

+ Custom sections and features per client requirements
+ Maintenance, support and hotfixes for client stores with quick response times

2021 - 2023

Burgess Commerce & Meaningful Mantras `full-time`

+ Built and modified sections and custom features per client specs
+ Worked on projects from start to launch, covering filters, search, upsell and more
+ Maintenance, support and hotfixes; supported teammates and kept timelines on track

2021 - 2023

DGK `part-time`

+ Built the "Build a Skate" skateboard builder on dgk.com: deck, trucks, wheels and other parts as custom options

SELECTED PROJECTS AT SARTORO

Sartoro storefront theme, main developer

The custom Online Store 2.0 theme behind sartoro.co. Configurator product pages, fit-profile flow, lazy-loaded cart drawer, quick add and recommendations, predictive search, a section builder for marketing, bundle and swatch-book offers, and Core Web Vitals work.

`Liquid, Web Components, Svelte, Vue, Tailwind, esbuild/Vite, Shopify CLI, GitHub Actions`

Product options & bundles app

Option sets and presets with add-on prices, a no-code "When, Then, Do" rule editor for merchandisers, and native Shopify bundles. Replaced a third-party app.

`Node.js, React, Polaris, Admin GraphQL, theme app extension`

AI virtual try-on

Shoppers upload a photo and see themselves wearing the garment. Photo checks, consent, rate limiting, A/B tested AI versions, and try-ons linked to orders.

`TypeScript, Remix, React, Polaris, Gemini image models`

AI product search & stylist

Natural-language search with smart filters and merchant boosting, plus an AI stylist chat that recommends real products with guardrails against made-up prices.

`SvelteKit, Cloudflare Workers, Workers AI, D1, Typesense`

Wishlist, reviews & Q&A

Named wishlists with guest merge, photo reviews with verified-buyer badges and post-purchase emails, AI review summaries, and rich-snippet ratings. Replaced a third-party app.

`SvelteKit, App Proxy, Web Components, Workers, D1, R2`

Order & tailoring operations

Customer fit profiles, an order re-confirmation flow before production, measurement analysis and factory sheets. Then a ground-up rebuild of the platform.

`Node.js, NestJS, React, Polaris, PostgreSQL, Redis, Docker`

First-party analytics

Consent-aware tracking, fit-tool funnels, Core Web Vitals monitoring with alerts after theme deploys, and bot filtering, in a dashboard styled like the Shopify admin.

`React, Cloudflare Workers, D1, Tinybird, Web Pixels`

Internal tools & prototypes

Made-to-measure and 2D suit configurator prototypes with live previews. AI on-model image automation for product photos. AI-generated wedding proposal pages for stylists. Face-recognition photo organizer that links products to models in Shopify. Browser body-scan and warehouse-mapping prototypes.

`SvelteKit, Astro, Python, FastAPI, Shopify Admin API, Docker`

LIVE STORES

Scentiment home fragrance, **Sartoro** custom menswear, **Lasermaster** B2B laser equipment, **Meaningful Mantras** candles, **Hit Box Arcade** gaming hardware, **Housenine** home and living, **DGK** skateboards.

SIDE TOOLS

+ Shopify Dev Quick Tools: Chrome extension for theme detection, preview links and admin shortcuts
+ GetFastImage: Chrome extension that converts page images to WebP

`Open to full-time, agency and freelance Shopify work` `nguyendo-cv.nhatnguyendothanh.workers.dev`
